

# Quick Cash-out Tool (QwkCash1)

## Overview:

This tool will quickly cash out all unpaid orders on your system all at one time. These orders will all be marked as paid by check, by the user that logs into the utility. The cash out machine will be "Quick Cashout Util". Check payment was chosen since most pizzerias don't use this payment type. This will make it easy to see which orders were closed out by this utility in the reports.

## Getting Started:

Unzip the QWKCASH1.exe file (or copy it) to your main POS Pizza folder. This would be LT, SA, or CS depending on which version that you are running. The file must be run from that folder because it requires access to the other DLL files that were originally installed with POS Pizza.

Launch the file by double clicking on it. Follow the prompts on the screen to use the utility.

## Requirements:

Once the program attaches to a database, the SUPER USER credentials will be required in order for any further action to be taken. Supply your user name and password for your current full supervisor user for the selected database. You must properly authenticate in order to use this tool.
